# Business Intelligence to Empower Your Enterprise

Discover the Story Behind Your Data.

Self-Service Dashboards and Reports • Data Governance • Data Modeling • Scheduled Distribution • Multi-Tenant Deployments

## Self-Service Ad Hoc Dashboards & Reports

Wyn is a self-service Business Intelligence solution that allows business users to design ad hoc data visualizations that facilitate analysis and strategic decision making.

## Embedded Business Intelligence Tools

Uncover new trends in your data. Get up to speed quickly and work seamlessly with embedded analytics.

## Data Governance & Modeling for Enterprises

Customize and granularly control data shared and transformed through the enterprise.

## Discover the Story Behind Your Data with a Fully Customizable and Embeddable BI Solution

### Self-Service for All

Easy-to-use web-based dashboard, report designer, and interactive viewers for both technical and non-technical end users. Intuitively create ad hoc visualizations and reports.

### Grow with Your Business

The lightweight server supports deployment in web farms and scalable virtualized environments. Provision servers as you need them to scale with your user load.

### Semantic Data Model Engine

Transform complex data schema to real world business relevant entities, attributes, and relations that end users can understand.

### Multiple Data Sources and Export Formats

Linking databases, text files, NoSQL, and cloud sources, is easy, intuitive and can export PDF, Excel, Word, CSV, PNG, and JPEG.

### Comprehensive APIs for Seamless Integration

The API allows developers to pre-authenticate users, embed the responsive portals and viewers into your web application, and implement all available features, leveraging the functionality of Wyn Enterprise.

### Visual Dataset Designer

Relate and aggregate data together visually in the Dataset Designer to define and discover relations within your data.

### Documents on Demand

Custom automated distribution schedules for recurring report and dashboard distribution.

### Data Governance

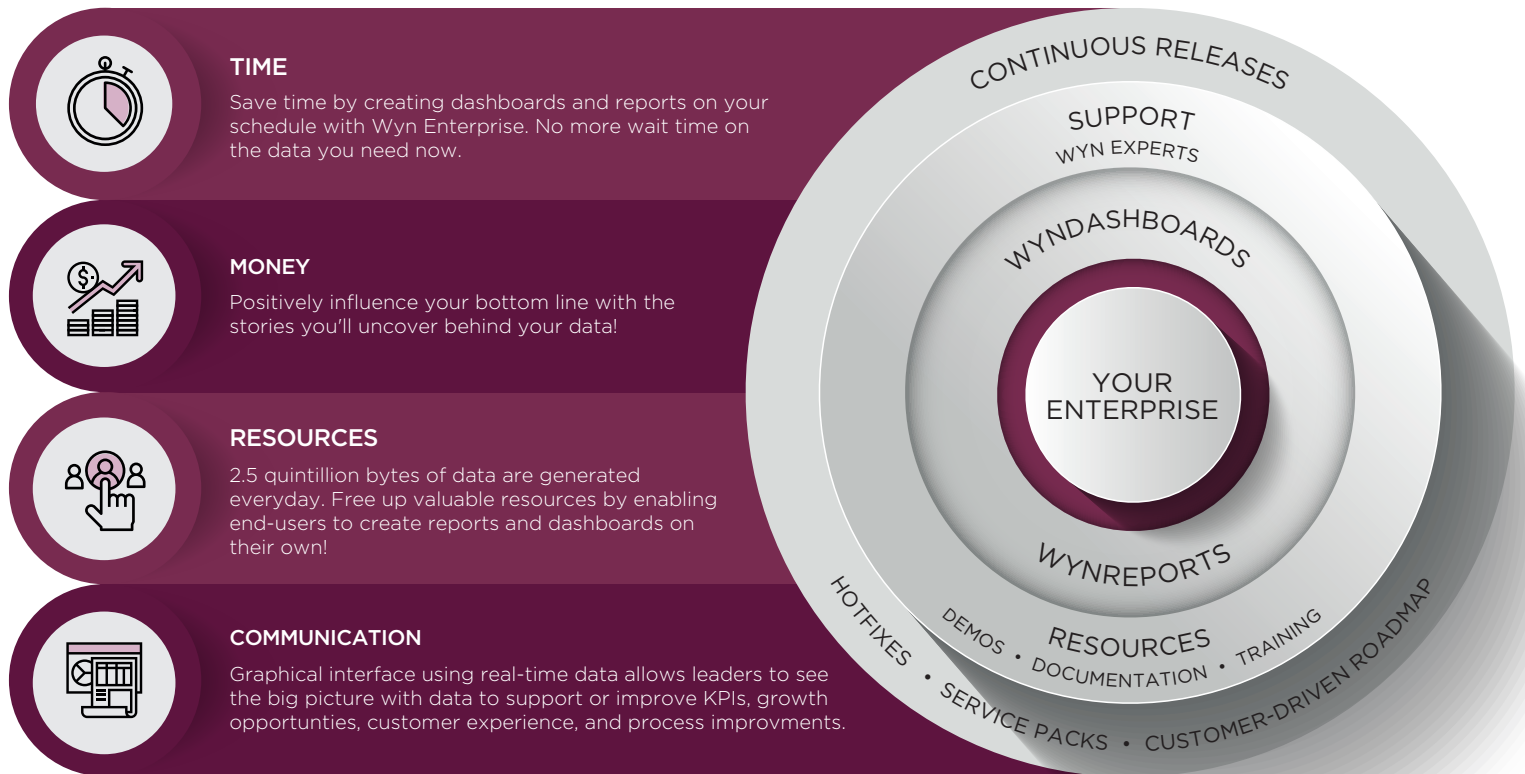

A centralized data repository, in a secured environment with role-based access, with modeled and structured data availability.

### Customizable Responsive Viewers

Seamlessly embed dashboards and reports to work as functional and interactive parts of your web app.

### Role-Based Extensible Security

Enterprise-grade security can integrate with your pre-existing authentication protocols including OAuth2, OpenID, Connect, ADS, LDAP.
